

# Flexible Operating Model

## Design your environment to meet your needs

Organizations can benefit from data for a number of reasons, but unfortunately they struggle to expand their data programs to new use cases. Tools may work for specific use cases at initial installment but may not be able to keep pace with the evolving needs of an organization. Although many organizations face similar challenges, every organization has a unique ecosystem and requires technology configured to its needs.

Collibra’s Flexible Operating Model enables organizations to design their environments to meet their needs. Various departments, teams, and roles all behave differently within an organization and have unique needs. Our Flexible Operating Model ensures that everyone can design a model that works for them while still integrating into the broader effort of the organization to achieve true and lasting Data Intelligence. Organizations can build an environment catered to their unique structures and get up and running fast with Collibra’s Flexible Operating model. Collibra also offers our out-of-the-box templates and allows organizations and individual departments to extend and fine tune the model rather than building a completely new/independent one.

### Customer quote

**“We [as data leaders] are here to help the business and bring value to them. You need to understand what they are doing, to speak their language, to make it simple for them – to understand not just their problems, but also their priorities and their ambitions. Ask yourself ‘how can you serve their ambitions?’”**

**Laetitia Chassefiere**  
Group Data Officer, CMA CGM

### Benefits

#### Configure and coordinate

A federated and flexible operating model allows teams to extend and enhance the model to meet their unique needs

#### Collaborate with all users

Establish common workflows and processes to automate tasks and increase speed to outcome across the business

#### Create a shared language

Define and standardize roles, responsibilities and terms to facilitate a common understanding within and across teams

#### Sustain high performance

Scale and adapt models as the business environment changes and needs to describe terms evolve

## Solution highlights

### Asset types

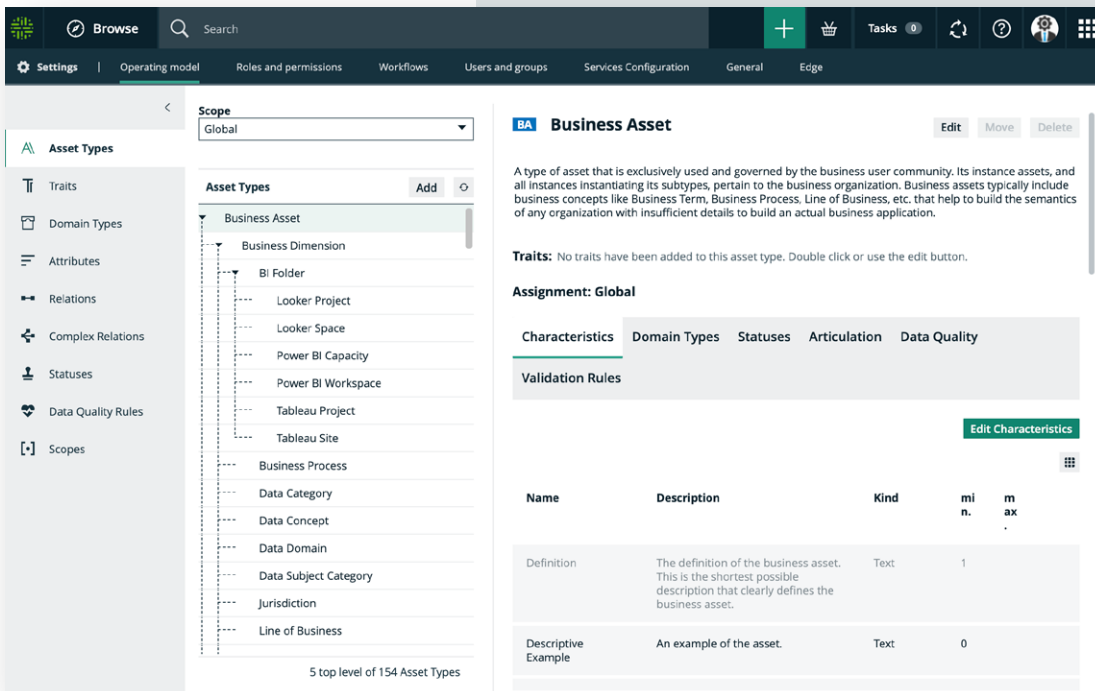

Extend and enrich asset types with attributes and relations to define structures that address your organizational needs

### Model management

Provide a stable, predictable and flexible Data Intelligence Graph to easily store governance data

### Scopes

Allow users from different teams and departments to build a federated operating model while maintaining unification and consistency

Design your model according to your organization's and departments' specific needs
